

OOPS

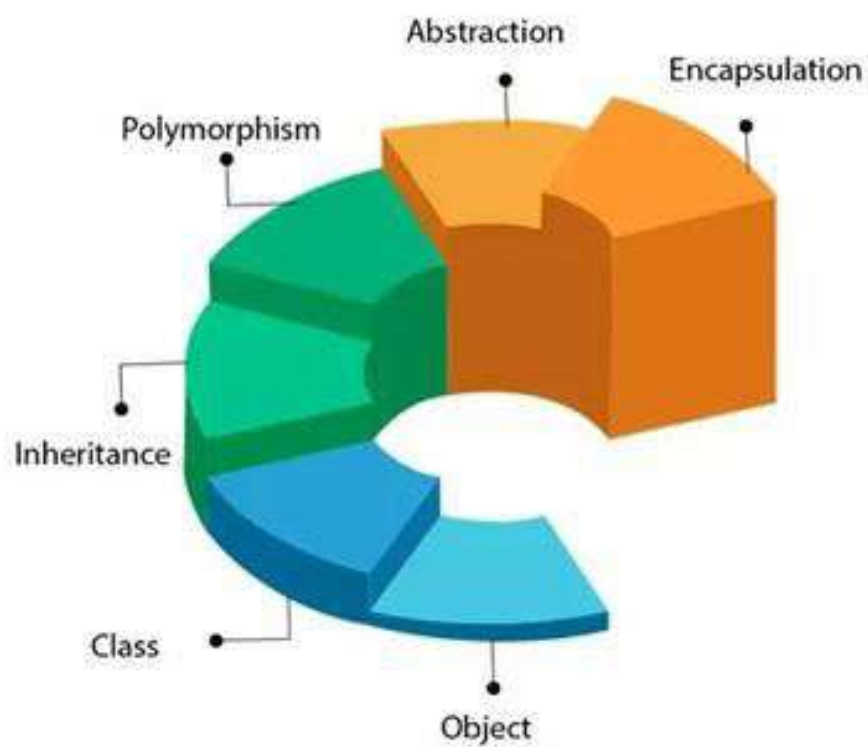

USING REAL-WORLD EXAMPLE

Brought you by
@vairagi.codes

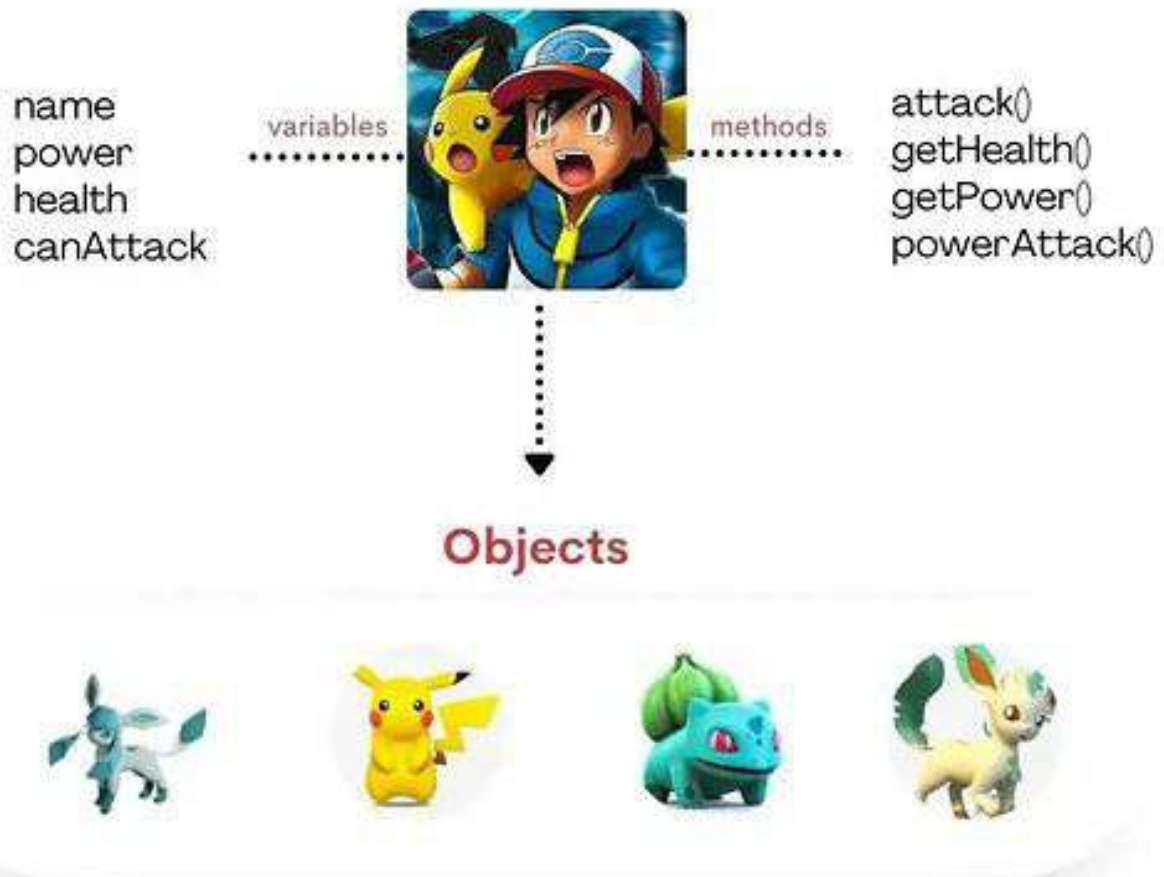

OOPs (Object-Oriented Programming System)

PokémonClass

PokémonClass contains all the state and behaviors to create real-time Pokémon Objects

Inheritance

Inheritance in Java is a mechanism by which one class acquires the properties and behaviors of the parent class.

PikaChu

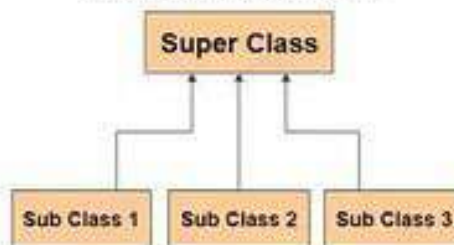

RaiChu

RaiChu is evolve from pickachu so it inherite all the properties of pikachu

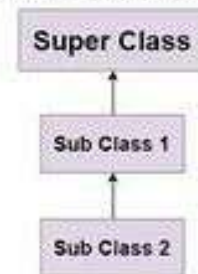

Single Inheritance

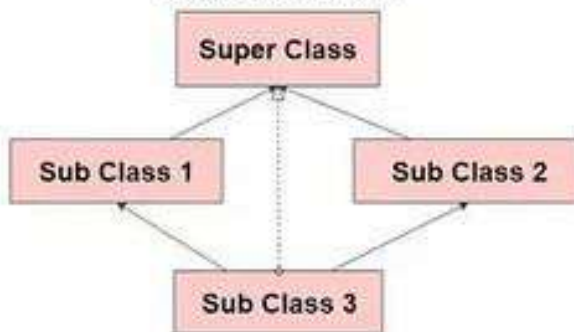

Hierarchical Inheritance

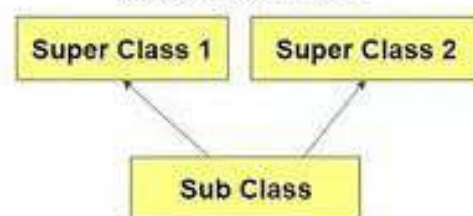

MultiLevel Inheritance

Hybrid Inheritance

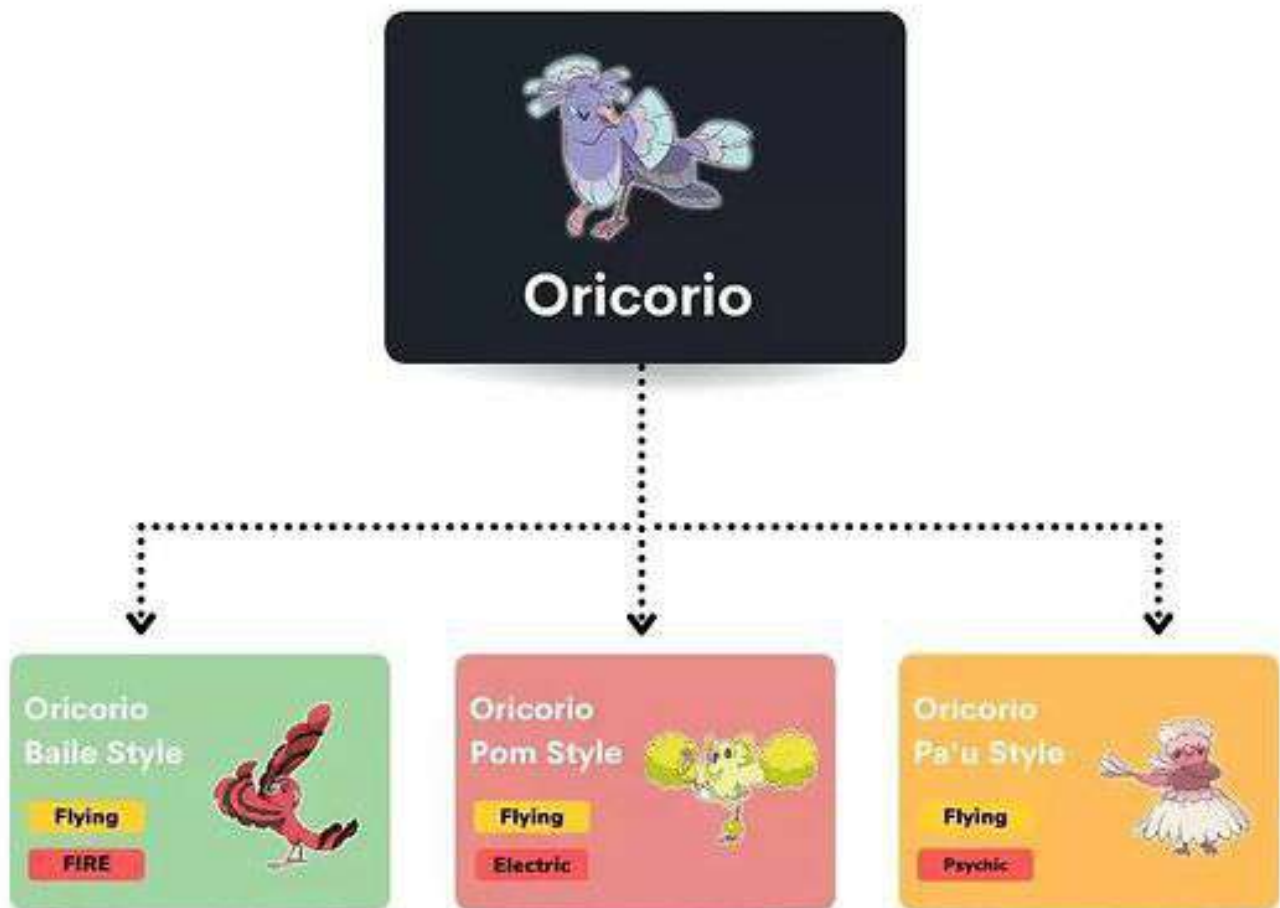

Multiple Inheritance

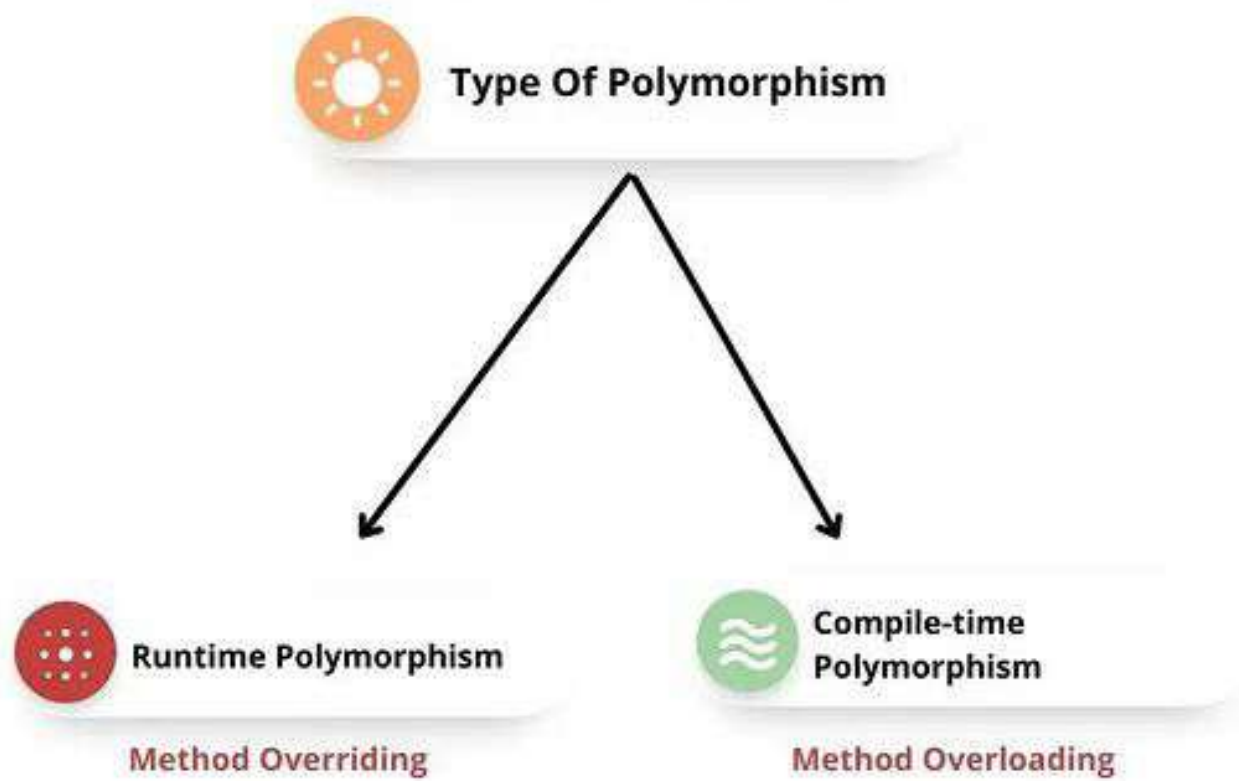

Polymorphism

Polymorphism is the ability to exist in many forms

Pokémon Oricorio has multiple forms

Abstraction

Abstraction is the concept of hiding the internal details and describing things in simple terms

With
Abstraction

Without
Abstraction

Encapsulation

Combining methods and variables
into a single entity or class

keep hustling
